Current Position

- **Position:** Software engineer
- **Current CTC:** 7.92 LPA

Technical Skills

- **Programming Language:** C, Core PHP, Laravel.
- **Databases:** MySQL, SQLite, PostgreSQL.
- **Frontend Technologies:** VueJS, NuxtJS.
- **Web Technologies:** HTML5, CSS3, Bootstrap, TailwindCSS, SCSS.
- **Scripting Language:** JavaScript, jQuery, Ajax, TypeScript.
- **Version Control Tools:** Git

Major Projects

Vibrant

- **Description:** In this project, I served as a backend developer, focusing primarily on change requests (CR) based on a business platform. The platform involves various vendors and services categorized by category, subcategory, and events, such as wedding planning and birthday celebrations. Additionally, the platform includes integrated affiliate payments for different plans.
- **Skills:** Core PHP, Laravel, MySQL.
- **Responsibilities**
 - Responsible for API Creation and change in APIs.
 - Developed deep-linking process for affiliate payment and forgot password process in CorePHP.
 - Unit Testing for APIs.

Apparel

- **Description:** In this project, I worked as a frontend developer on a desktop application. This application involves several operators who can create tests, which include various templates. Additionally, a machine is connected to the desktop application, featuring start and end buttons for reading time and RPM, which is further connected to a sewing machine. During the sewing process, users must attach a barcode, generated while creating the test, to the finished job. This barcode is printed and attached to the completed job, allowing it to be matched with the corresponding test templates. Once a match is found, the test is marked as completed. Moreover, the project includes a web portal accessible by administrators. This portal provides comprehensive information about the project, including details on tests, templates, operators, and scanning activities, along with their statuses.
- **Skills:** VueJS, SQLite, Laravel.

- **Responsibilities**

- Responsible for front-end development specifically for change requests (CRs) in desktop application.
- In web portal also, responsible for front-end developer.
- Responsible for API integration and Unit testing.
- Communication with client.

Bulmann

- **Description:** In this project, there are various parts and machines involved. The admin has the authority to manage everything. Users can add parts to specific machines for processing. Once a part is completed, users can add a note and mark the part as finished. This is how the project operates.
- **Skills:** Laravel, JavaScript, CSS, MySQL.
- **Responsibilities**
 - Responsible for work on change requests (CRs).
 - Responsible for front-end and back-end development.

Oktra – Be Wonderful

- **Description:** In this project, I contributed as a full-stack developer with a focus on both development and design. The project revolves around meeting sales requirements and encompasses various interconnected modules, including leads, lead sources, contacts, third-party contacts, prospects, projects, addresses, lookup addresses, incumbents, buildings, companies, lead forensics, and scheduling events and meetings. These modules are interlinked; for instance, leads are associated with contacts and third-party contacts, while contacts are linked to addresses. Additionally, prospects are connected to leads and other related entities, forming a comprehensive and integrated system.
- **Skills:** Laravel11, NuxtJS, VueJS, Typescript, TailwindCSS, PostgreSQL

- **Responsibilities**

- Responsible for full stack development with design.
- Responsible for responsive design and API integration in NuxtJS & VueJS.
- Responsible for make project based on Typescript.
- Also, responsible for make some APIs in Laravel11.
- Communication with client.
